# Co-Designing a Fairness Dashboard
Quarterly Updates - Winter 2025

Project Achievements

Based on advisors' feedback, we created a Project Milestone Tracker. View it here.

Our first paper was accepted to be presented at the FHLIP conference. Register to attend here.

We obtained a Tableau license to begin building the Fairness Dashboard.

The Missingness Problem

Our team has been working to co-design solutions for the large number of missing data in our dataset. Through collaborative discussions, we've shared insights and explored the various challenges related to missing data. During our meetings, we introduced the following statistical approaches to address this problem:

- Complete case analysis
- Statistical imputation
- Supplementing with other sources
- Mark as missing

After much discussion, the team reached a consensus for our next steps:
Show all missing data and mark as missing!

Looking Ahead: Our Next Steps
January - March 2025

- **Conduct 6 additional targeted focus groups**
- **Co-develop advisory video for dashboard users**
- **Develop the Fairness Dashboard in Tableau**
