

# KCNI Celebrates One Year!

The **Krembil Centre for Neuroinformatics** is proud to celebrate its one year anniversary with an all-day event to celebrate its one-year anniversary.

With opening remarks from Dr. Catherine Zahn, Deborah Gillis, Dr. Bruce Pollock, and Dr. Damian Jankowicz, the event included a Keynote from Dr. Etienne Sibille and presentations from the Centre's Scientists, trainees and informatics team.

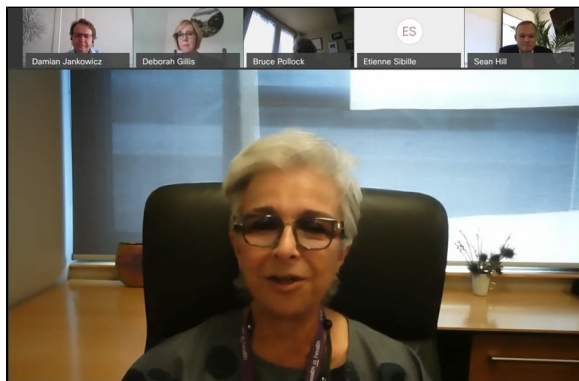

"I remember my first look at the Centre. As a visitor, I saw all the glass and light as a window into the future of mental health care – the best care through research and innovation. It represented all the things I value about CAMH: the optimism, the opportunity and the unity of purpose toward a hopeful future. In only your first year, you have not disappointed! Congratulations on all of your achievements" - Dr. Catherine Zahn, President and CEO of CAMH

Presenters focused on how their work is having an impact and how they would use knowledge translation to ensure research findings would be taken up in practice.

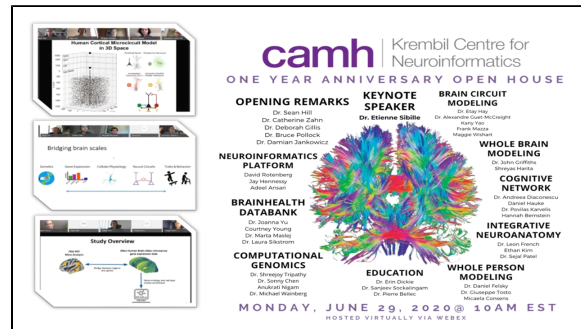

We had great feedback from across our community. We thank everyone who has supported us thus far and sincerely hope that next year we are able to host our colleagues in the Centre.
