

Coding

Here you will find scripts that we developed overtime and that we think may be useful for your work, mainly because we use these scripts very often.

R Scripts

- [Power Analysis - Logistic Regression - Two Groups and no Covariate](#). This is a R script for simulations that estimates power for Logistic Regression models.

SPSS Syntax

- [Macro for Generalized Linear Models](#) - This macro allows you to easily run Generalized Linear Models (Logistic, Poisson, Gamma, Negative Binomial, Normal) and at the same time have graphs for diagnosing distribution, influential points and outliers. It is specially useful if you plan to run many models with similar control variables.
